

Graniflex™
Granite-like resurfacing with a fast-setting "bond-like-crazy" moisture vapor resistant flexible membrane. Exterior/Interior Color Flake or Quartz broadcast system. One day installations – the ultimate drive way and pool deck coating!

Protector Color Flakes
The optimal system for industrial, commercial, and garage floors. Brilliantly colored media provide high durability, impact, scratch and chemical resistance when combined with our epoxies and urethanes.

Metallic Marble Stain
Above and beyond traditional concrete staining. The luster and depth of a three-dimensional color produced with this popular process will amaze everyone that enters your business or home. A satin urethane can be added to simulate a natural marble finish.

Rustic Concrete Wood
Inside or out this cementitious coating will be the topic of conversation. Better and harder than other wood flooring options and as tough as petrified wood. Beautiful enough for your showroom and durable enough for your basement.

Seamless Spray Texture
Decorative concrete resurfacing with our High Density Resin and Texture Mix. Colorful cementitious highlights produce an excellent design and anti-skid finish.

Water-Based Stain
Applied to our cementitious sprayed grout coats or multi-layered textures – multicolored effects can be obtained by applying different colored stains, one on top of the other. Pigments are applied to the surface with deep-penetration technology. No solvents, acids or neutralization required with The Concrete Protector® Water-Based Stains!

Resinous 123 Flooring System
An economical solution for a seamless, chemical, UV, and scratch resistant, "clean floor" look. It is completed with Protector-Thane 1000 top coat for maximum light reflectivity.

Fast Setting Poly Hybrids
Combine the best features of epoxy and urethane with high and low build, UV resistant, Polyaspartics. Can be added into most of the Protector Systems to create fast setting floors, completed in one day.

Epoxy Tile
With all of the same features of the Protector Color Flakes yet designed for the elegant look of granite or quartz tile without the dirt-catching grout lines. High build UV resistant topcoat brings out a smooth showroom finish. Our CP Base Coat Epoxy is especially formulated to create this unique look.

CP Stamped Overlay
Our stamp mix is infused with strengthening fibers for unbeatable toughness. Just prime the surface, add water, mix, and you're ready to go! One bag mix plus our mineral pigment coloring systems eliminate unneeded inventory.

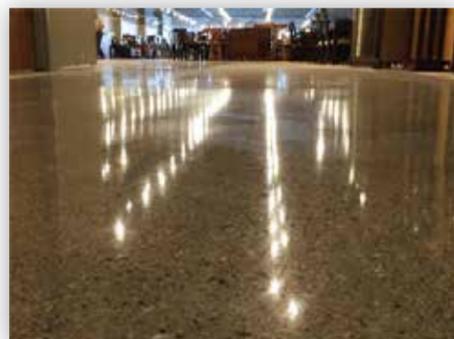

Stenciled Spray Texture
Create endless patterns of brick, stone, or tile with CP design tape and stencils. A raised surface effect combined with recessed grout lines will give the finish a three-dimensional look.

Tuscan Slate
Authentic look and feel of slate. The integral color contrast between each layer of slate texture becomes more enhanced with multi-layered textures and the CP antiquing process.

Protector Images
Create a three dimensional look while adding value and a personal touch to any Protector Floor System with our fabric printed graphics. Not a vinyl sticker that you get from a sign shop. Our embedded UV resistant images become an integral part of your flooring system.

Concrete Polishing
We teach the process and stock all of the equipment, tooling, and chemicals for this modern flooring system. LEED qualified and preferred by world class companies, retailers, hospitals, churches, schools, and government buildings. Large concrete areas can be transformed into clean, colorful, functioning flooring, using The Concrete Protector Polishing techniques.

Penetrating Sealer "Clean & Seal"
Trusted to protect the oldest concrete street in America! Summer beats-up on your concrete and Winter knocks it out...no wonder it's starting to pit, pop, crack, and flake. The Concrete Protector® works by penetrating into the pores of the concrete and then creates a protective barrier. Economical, environmentally friendly, and doesn't change the texture or color of the concrete.

Grand Flagstone
Create over-sized stones on pool decks, patios, porches, and more. Stone texture troweling is done over hand-crafted patterns followed by a layered antiquing process for a natural flagstone look. Finally the authentic look of a large stone without breaking the bank.

Basement Waterproofing
Sani-Tred® Basement Waterproofing is the only waterproofing product scientifically proven to permanently waterproof any basement. Properly applied we guarantee basements will stay dry for life. 99% effective at preventing harmful radon gas from entering foundations.

Sani-Tred® Systems
The world's one and only liquid rubber coating systems that permanently repairs and bonds to concrete, wood, fiberglass, and metal. Waterproof pools, basements, roofs, boats, animal enclosures, fountains and more. Sani-Tred® Systems retain negative hydrostatic pressure.
